

Powerlift DCD100 / DC250

The powerlift DC250 and DCD100 trolleys are best suited to aid in lifting of heavy objects. The electrically driven mechanism is silent, quick and efficient.

MOTORDRIVE CONVERSION

Motorised conversions can be carried out on either new or pre-owned lifters with excellent results that greatly enhance both maneuverability and control.

SIX WHEEL CONVERSION

To convert either a hydraulic or electric lift table to a very handy lift trolley, a six wheel conversion could be your answer. This conversion completely changes the characteristics of an original supplied lift trolley, giving you both excellent stability and steering.

Features:

- Silent electronically driven mechanism
- Height adjustable
- Easily maneuverable
- Strong and reliable
- Low power/charge light
